APPENDIX A - Installation Guide Colla

INSTALLATION GUIDE COLLA

CONFIGURE XML SERVER_CONF

Before installing, the user must configure the file server_conf. You should only edit the field for the IP address of the server machine. Server_conf The XML file must be present in the same directory and projects CollA_Client CollA_Host . Without the correct IP address of the server platform Colla does not work.

INSTALL SERVER

The user must choose a machine to your network and install the jar called CollA_server. No information will be required in this step.

INSTALL CLIENT

After the server is running, install the jar CollA_client the machine that the user craves submit jobs, to chat, etc.. If the user has more than one device, just install on as many computers CollA_Client crave. Once installed, the user logs in or signs up on the platform Colla.

INSTALL HOST

Finally, how many hosts crave install using the jar CollA_Host. Each host will require record user data, so a user must already be registered on the platform Colla.

I HAVE ALREADY INSTALLED, NOW WHAT?

After all Colla platform installed, you can invite as many customers crave and these hosts can register, submit Tasks, etc.., Becoming a department, a university, a software house, a research group, etc.., A group Colla.

USER'S GUIDE COLLA

It is essential to read the User Guide document. With him learn to use the services already available on the platform Colla.
